

Accessibility and Mobility Services

GREENWAY

GREENWAY TRANSPORTATION PLANNING

Sustainable Movement

At Greenway we believe that sustainable transportation is accessible transportation. Travel modes should be accessible to users regardless of their ability. Barriers to mobility in the public right of way need to be overcome to provide a truly multi-modal transportation network. Greenway offers specialist services in accessibility audits and travel training to assist agencies and the public to overcome these barriers.

Working with Mn/DOT's Metro District and ADA project Office, Greenway completed the most extensive assessment of pedestrian facilities in the Twin Cities' trunk highway network this year. This specialty extends to promoting transit use via bus stop audits and travel training. We have trained with Easter Seals to provide individualized support to persons with varying abilities to help them gain more independence by learning how to use fixed bus and rail services.

We have a thorough understanding of the mobility requirements that are critical to providing facilities that meet universal design standards, either as part of temporary construction or permanent access.
