

## US Bank (Vikings) Stadium

Client: Minnesota Sports Facilities Authority, Vikings

Team and HKS Architects

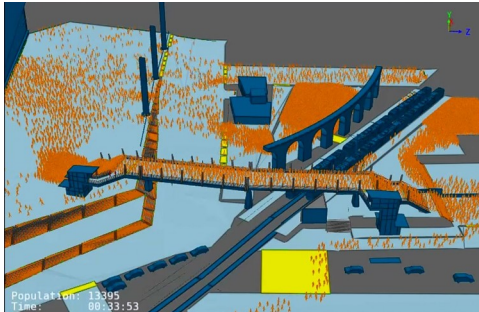

Services: Transportation Planning, Pedestrian Modeling

**GREENWAY**  
Transportation Planning

Greenway provided transportation planning advice on:

- Pedestrian circulation
- Bus and rail transit accommodation
- Bicycle circulation and parking
- Car parking strategy
- Taxi and charter coach strategy
- Event traffic management

PS 105 Vikings

Greenway provided transportation planning advice for the \$1 billion US Bank (Vikings) stadium, taking the lead in assessing pedestrian and vehicle circulation. Greenway worked with the HKS architects and urban designers to design the immediate area around the 65,500-seat stadium to make it a destination for both event and non-event days. We are carefully analyzing pedestrian and vehicle accommodation demand to make circulation safe and efficient. The result is a truly multi-modal transportation strategy that optimizes use of the light rail and other public transit, charter buses, bicycles and private cars. This will make a great experience for everyone who comes to the stadium, for whatever event.
